

Program Versions

[\[Featurelist\]](#) | [\[Decision Help\]](#)

OnyxCeph^{3™} can be activated in different pre-configured program versions. It is possible to switch between program versions at any time by re-activation.

To find out which program version is best suited to digitally map the user's workflows, this overview can be used as a [decision aid](#).

OnyxCeph^{3™} can be used in all program versions throughout the network. The integrated option of online/offline data exchange via containers supports collaboration between practices as well as between practices and laboratories.

In all program versions, OnyxCeph^{3™} can be used in a client/server network setup. By integrated options for synchronized data exchange via container the online and offline communication between practices and also between practice and laboratory is widely supported.

OnyxCeph^{3™} OMS

[Program version OMS](#) is focussed on combined orthodontic & oral maxillofacial surgical treatment planning basing on digital models and volume Xray data. This program version integrates all functionality of program version 3D Pro including option Treatment Simulation 3D (Sim 3D), Waefer Creation 3D plus 20 concurrent network clients. In addition, other optional modules (e.g., modules Wire_Bonding, Aligner 3D, Retainer 3D, V.T.O.3D) but also customized lab modules developed by Image Instruments can be activated on request.

All program versions OnyxCeph^{3™} can be used in a client/server network setup. By integrated options for synchronized data exchange via container the online and offline communication between practices and also between practice and laboratory is widely supported.

The export of 3D data in open formats like STL, OBJ, ZPR, OFF, DXF or PLY is supported in this program version. Program version OMS is only available in license type RL+ (purchase license).

OnyxCeph^{3™} LAB

[Program version LAB](#) is intended for use by dental laboratories and dental service providers. This program version integrates all functionality of program version 3D Pro including option Virtual Setup (V.T.O.3D) plus 20 concurrent network clients. In addition, several optional modules (e.g., modules Wire_Bonding, Aligner 3D, Retainer 3D, Waefer Creation, Treatment Simulation 3D) but also customized lab modules developed by Image Instruments can be activated on request.

All program versions OnyxCeph^{3™} can be used in a client/server network setup. By integrated options for synchronized data exchange via container the online and offline communication between practices and also between practice and laboratory is widely supported.

The export of 3D data in open formats like STL, OBJ, ZPR, OFF, DXF or PLY is supported in this program version. Program version LAB is only available in license type RL+ (purchase license).

OnyxCeph^{3™} 3D PRO

[Program version 3D Pro](#) is intended for use in orthodontic and OMS practices where 2D images and 3D findings are available at the same time. Modules Wire_Bonding, Aligner 3D, Retainer 3D, V.T.O.3D, Waefer Creation and Sim 3D can be activated on request.

Program version 3D Pro will help you to realize an effective workflow in archiving, diagnostics, treatment planning, and patient education and therefore to optimize practice management and patient treatment.

All program versions OnyxCeph^{3™} can be used in a client/server network setup. By integrated options for synchronized data exchange via container the online and offline communication between practices and also between practice and laboratory is widely supported.

Program version 3D Pro is available in license type RL+ (purchase license) and OSL (open subscription).

OnyxCeph^{3™} 2D PRO

[Program version 2D Pro](#) is intended for use in orthodontic and OMS practices where mainly 2D findings are available.

Program version 2D Pro will help you to realize an effective workflow in archiving, diagnostics, treatment planning, and patient education and therefore to optimize practice management and patient treatment.

All program versions OnyxCeph^{3™} can be used in a client/server network setup. By integrated options for synchronized data exchange via container the online and offline communication between practices and also between practice and laboratory is widely supported. Program version 2D Pro is available in license type RL+ (purchase license) and OSL (open subscription).

OnyxCeph^{3™} BASIC

[Program version Basic](#) can be used by dental practices where 2D images and 3D data are used at the same time.

Program version 3D Basic will help you to realize an effective workflow in archiving and patient education and therefore to optimize practice management and patient treatment.

All program versions OnyxCeph^{3™} can be used in a client/server network setup. By integrated options for synchronized data exchange via container the online and offline communication between practices and also between practice and laboratory is widely supported.

Program version 3D Basic is available in license type RL+ (purchase license) and OSL (open subscription).
