

#3424 Re-opening 3D Modul Segmentation

Since Release 3.2.31 3D modul [Segmentation](#) can be re-opened with a segmentation finding saved in the module itself (e.g. after step [Segmentation] or [Complete Crowns]) before.

If 3D module [Segmentation](#) is re-opened with a finding saved after substep [Segmentation], the workflow can be continued here.

If the module is re-opened after substep [Complete Crowns], after [Complete Crowns] was applied again, the workflow can be continued with replacing badly registered crowns by tooth list contextmenu items

- Alternative Crown (previous|next)
- Manual Correction
