

Module Bonding Trays 3D

Program version	BASIC	2D PRO	3D PRO	LAB	OMS
Availability	×	×			

In module Bonding Trays 3D, digital indirect bonding trays for brackets (IBT) can be designed that run along an adjustable cutting line with an adjustable thickness on the occlusion side. Brackets whose position e.g. was virtually planned in module [FA_Bonding](#) or [Wire_Bonding](#), with a sleeve and / or a kylix frame. The specific geometry of the IBT can be individually adjusted depending on the bracket shape.

If the case includes 3M™ APC™ Flash-Free brackets, an additional design option is provided for them.

First Steps

1. Fine adjust points which have been automatically placed at the brackets
2. Select bracket frame or housing and parameters according to the print material
3. Compute the trays, export 3D using the object list
4. Save as project and new finding
