

Onyx3Config

Program Onyx3Config can be used to query or modify the status of the database server. It is set-up by the server installation process. It can be launched from the Windows™ start button via program group Onyx3server or by the corresponding desktop icon if available.

Program user interface

Several server settings are displayed:

- License type (Trial|OSL|RL+)
- License validity (red=invalid|green=valid)
- Database status (red=inactive|green=active)
- Database folder location
- Availability of update

If appropriate, the following actions can be performed for maintenance:

- Switching database server operation mode between service and program
- Installation/Uninstallation of service for database server onyxDBserver.exe
- Checking for online updates
- Performing online updates

- Proxy settings configuration (if used)
 - Launching QuickSupport
-
