

OnyxStat

With the help of client application OnyxStat, Onyx databases can be queried and evaluated statistically according to different criteria. The query results can be saved and exported in CSV format. OnyxStat requires a separate, one-time fee-based activation.

The program starts from the program group OnyxCeph3 at the local workstation.

User interface

The screenshot shows the Onyx Stat application window. The main area displays a large table of patient data under 'Query 1'. A smaller window titled 'Query 2' is overlaid on the main table, also showing patient data. To the right of the tables is a sidebar with various configuration options:

- View:** Shows 'Query 2' and includes a 'Color' button and a 'Categories as Text' checkbox.
- Sort By:** Set to 'Patient Filter'.
- Patient Filter:** Shows checked filters for Patient ID, Client, Name, First Name, Gender, Birth, Finding Date, Image Type, 2D/3D, Attributes, and Status.
- Data Filter:** Not currently active.
- Columns:** Shows a list of columns with checkboxes, all of which are checked.
- Image:** Displays a small thumbnail of a lateral cephalometric radiograph.
