

# Launching Database Server

In standard operation mode, Onyx database server program [OnyDBServer.exe](#) should run as Windows™ service. The service can be launched and configured either by the Windows™ control panel or (recommended) in program window [Onyx3Config](#) by button [Start Server as Program].

If Onyx database server program settings [OnyDBServer.exe](#) should be modified, the program has to be launched as application by button [Start Server as Program ] and then opened from the task bar system tray icon.
